

Exporting Data & Log Files for Inject Responses

Most injects only ask for a business memo reply. However, some will ask for a data file, sometimes in addition to the business memo. These files may be a document, data, packet captures or log files.

These will need to be exported from the topology so that they are accessible to the Inject Scoring Engine for uploading.

To accomplish this, use the team's Next Cloud facility to do this. From the topology, access NextCloud to upload the file, then from a PC that is accessing the Inject Scoring Engine, download the file from NextCloud, then upload with the inject response.

The Inject Scoring Engine permits multiple files in any one response. If supplying a business memo, upload that file first.
